

Notivus and Nexus Systems Announce Integrated Vendor Management and Purchasing Solution

Atlanta, GA.-June 3, 2013- Notivus and Nexus Systems today announced the launch of an integrated vendor management and purchasing solution. Through a robust integration, real-time vendor compliance updates are electronically fed into both the NexusPayables procure-to-pay system and property manager A/P systems to ensure vendors are credentialed and approved before performing work, and that all stakeholders are working with consistent vendor records.

“Property Management firms are increasingly focused on using technology to enhance operations and to meet client requirements, said David Cook, Notivus President & CEO. This partnership fits into our broader strategy to offer an end to end Vendor Management System that unlocks visibility into vendor information, allowing organizations to better manage spend, compliance, risk and gain efficiency by optimizing every step of the vendor lifecycle”.

RA Snyder, based in San Diego, CA., collaborated with Notivus and Nexus Systems and has been instrumental in the development of the product. "We were with a vendor compliance company that offers a similar service, however the dimension of the Notivus technology and information management capabilities greatly surpasses solutions available from that provider. Notivus' real time data integration with our existing NexusPayables procure-to-pay solution, and our A/P and Ops systems improves efficiency, enhances spend management, reduces exposure; and ensures that we are working with highly accurate and consistent data throughout our enterprise", commented Rick Snyder, President.

Today’s announcement highlights a key feature of the solution, the ability to ensure data is consistent in multiple systems. Because the Notivus Vendor Compliance technology is highly configurable to customer business rules, the information that is integrated into their systems reaches well beyond simple “status flags”. The result is more accurate data and a much easier vendor management process for clients.

“Integrating the Notivus platform with the NexusPayables procure-to-pay solution allows for an advanced layer of vendor compliant data to be used by all the employees throughout the payables transaction. We are thrilled about the Integration Partnership and the enhanced vendor management and insurance compliance it provides,” added Thomas Coolidge, CEO of Nexus Systems.

About Notivus. Based in Alpharetta, GA, Notivus delivers innovative vendor compliance solutions to the Apartment Industry. Utilizing proprietary state of the art technology and high touch customer service, Notivus has created the next generation in vendor management revolutionizing how property managers and their vendors manage risk & compliance, build relationships and improve commerce. With over 25 years of experience transforming credentialing criteria for the Fortune 1000, the healthcare industry and Homeland Security, Notivus was invited by leaders in the multifamily industry to adapt its technology and expertise to meet the needs of vendors and apartment managers.
